## Summary

Software engineering professional with 7.5 years of experience in frontend and backend development, expert in React.js and RESTful APIs. My key achievements include leading the development of AI-powered category recommendations that reduced API latency by 35%, and engineering a real-time messaging pipeline that cut message latency by 40%. Seeking a Senior Frontend Software Engineer position at Comcast, where I bring my frontend engineering and cloud solution skills to support your mission of creating innovative entertainment and online experiences for millions of customers.

## Key Achievements

 <b>Technical Leadership Success</b> Led a team enhancing system performance, achieving a 35% reduction in API latency using React.js.	 <b>React.js Performance Boost</b> Implemented React.js solutions, supporting over 10,000 users while improving response times by 40%.	 <b>Developer Mentorship Initiative</b> Mentored developers in React.js fundamentals, leading to a 50% improvement in code quality metrics.
--	--	---

## Technical Skills

Languages: JavaScript, Python, HTML, CSS3

Databases & Cloud: MySQL, Postgress, Redis AWS,GCP

Tools & Frameworks: React JS • Nodejs • Next.js • Figma • Terraform • Redux

Concepts: Data Structures • Algorithms • RESTful APIs • Microservices • Infrastructure as Code • CI/CD

## Experience

<b>Altimetrik</b> Senior Product & Platform Engineer	Chennai, India 03/2022 - Present
<ul style="list-style-type: none"><li>Led development of AI-powered category recommendations using Node.js on AWS Lambda, reducing API latency by 35% via caching strategies with API Gateway and CloudFront.</li><li>Automated scalable AWS provisioning using Terraform infrastructure-as-code for repeatable environment setup.</li><li>Integrated schema markup into a <b>Next.js</b> platform to boost SEO visibility and increase organic traffic.</li><li>Engineered infinite scrolling and pagination using <b>SSR</b> and <b>GraphQL</b> in <b>Next.js</b>, enhancing Google crawl lability.</li><li>Refactored a React.js-based mail module for an internet banking system, streamlining user communications.</li><li>Mentored three or more junior developers by leading code reviews, deployment sessions, and fostering engineering best practices.</li></ul>	
<b>Codenatives</b> Senior Software Engineer	Chennai, India 07/2020 - 03/2022
<ul style="list-style-type: none"><li>Engineered a real-time messaging pipeline with Google Cloud Pub/Sub and WebSockets, reducing message latency by 40%.</li><li>Streamlined system throughput by 20% by integrating Redis caching in high-load environments.</li><li>Established secure Node.js middleware for JWT and AI-based access control.</li><li>Implemented AWS Cognito Authentication flows supporting email and social logins.</li><li>Enhanced HR dashboard by extending Python scraping scripts to optimize data ingestion.</li></ul>	
<b>Stanzatek Solutions</b> Software Developer	Bangalore, India 06/2018 - 06/2020
<ul style="list-style-type: none"><li>Modernized backend performance by 30% by optimizing PHP and MySQL APIs for employee management systems.</li><li>Enhanced server uptime by 20% by designing a Python service for automatic server recovery.</li><li>Launched data-rich admin dashboards using jQuery and integrated interactive charts.</li><li>Created a Progressive Web App (PWA) for quiz delivery, deployed on Google Play Store for cross-platform learning.</li><li>Initiated email automation tools using PHP Mailer for scalable campaign delivery.</li></ul>	

## Projects

---

### SEO OPTIMIZATION FOR ECOMMERCE PLATFORM

- Increased organic traffic by **15%** and category rankings by **20%** by deploying JSON-LD schema and validation scripts.
- Tech Stack: Node.js, Python, GraphQL, AWS Lambda, S3 bucket, Terraform.

### AUTOMATED MAILING AND RENEWAL MANAGEMENT FOR CHINESE NEW YEAR

- Launched a scalable mail feature for B2C communication, built a digital currency voucher system for promotions, and developed a validation script for SEO optimization.
- Boosted marketing engagement by **20%**, uplifted user participation by 30% with over 10,000 customers, and strengthened organic traffic by 15%, driving measurable revenue growth.
- Tech Stack: React.js, Node.js, Python, GraphQL, AWS Lambda.

### SPORTZAG

- Built the communication layer for sporting, a real-time social commerce platform supporting **1,000+** concurrent users.
- Enabled instant user engagement, driving a 40% increase in customer interactions while monitoring and optimizing success rates, response times, and error rates.
- Tech Stack: React.js, Node.js, Google Cloud Platform (GCP), HTML/CSS.

### Digitiv

- Optimized Digitiv, a leading podcast platform, enhancing real-time engagement and performance.
- Multiplied audience reach by 25% and revamped platform performance by 30%, using listener insights to drive content strategies and boost retention.
- Tech Stack: Google Cloud Platform (GCP), BigQuery.
- Developed and maintained the Employment Management System (EPM) to streamline employee data and HR processes.
- Elevated data management efficiency and enabled faster HR operations, enhancing overall workforce administration. Tech Stack: PHP, MySQL, jQuery.

### Net Scholar

- Improved quiz participation by 30% through developing Net Scholar, a responsive PWA with offline access.
- Hardened system efficiency by 20% by integrating PHP, MySQL, and HTML/CSS.
